THE RIGHT WAY SA

This is an overview of our business and a potential process. However keep in mind that each business and project is unique and we can develop the processes needed according to the business and its requirements.

1. Introduction

1. An introduction meeting will be arranged where we can get to know each other and understand your business needs an how our business can potentially assist.

2. Understanding your business

1.The best person to help us understand your business is you. We will work closely with you and your core team to understand your business, processes, and products.

3. Determine measurement parameters.

1. Research is an effective tool in understanding a problem or measuring a solution, but it needs to be targeted and implemented timeously and effectively to ensure value.

2. Also, research can take on many forms and the best approach will be determined together through consultation.

4. Measurement methodologies and approach

1. The research team will assess all the information gathered and partner with the correct partners to start the project.

5. Measurement and evaluation period

1. Each research project is unique therefore the period and approach will be customized per client.

6. Findings

1. The findings will be presented in a report format that is easy to understand. During this session we will determine the best way to develop solutions to findings.

7. Solutions development

1. Developing solutions can take on many forms. E.g., The Right Way Team will work with the client and employees to develop an action plan. There are numerous experts to consult in specific fields to help develop solutions.

2. There are also times that the issues found are bigger than one business and an industry can work on a solution together.

8. Implementation - test case

1. Once a solution is developed we suggest that it's implemented on a small scale to determine its effectiveness and to iron out the process required to implement effectively.

9. Broad implementation of solutions

1. Once the test case is completed and successful a full project plan and implementation timeline will be created and implemented. We provide comprehensive implementation support, ensuring that your team understands and embraces the changes, resulting in smooth transitions and long-term success.

10. Measurement of success

1. Two phases of measurement are always suggested. Firstly, directly after the implementation of the solution and again 6 months to a year after to determine effective implementation of solution and if the desired outcomes have been achieved.
